***Allowable Subject Matter***

The following is an examiner's statement of reasons for allowance: the examiner has considered applicants' amendment filed March 2, 2005. Said amendment was sufficient to overcome the rejection of record under 35 U.S.C. 112, second paragraph.

The closest prior art of record, i.e., U.S. 6,437,191 to Choudary et al teaches a process for the acylation of aromatic compounds using a solid catalyst comprising indium halide; however, said reference fails to teach or fairly suggest conducting the acylation with a metal halide to inorganic solid weight ratio in the range of 0.01 to 1.0, such that the amount of metal halide consumed in the reaction is greater than or equal to 0.1 mmol per gram, and the amount of hydrogen halide evolved in the reaction is greater than or equal to 0.1 mole per mole of metal halide consumed in the reaction. This limitation allows for acylation of aromatic compounds having highly ring deactivating groups, with a high conversion of the acylating agent; table 1 in the instant specification shows conversions of acylating agent from 96 to 99 percent. Accordingly, the instant claims are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
